The **AQUA Cube** is made from sturdy UV-resistant PE (polyethylene) and combines a full wet bootwash function encased in a cube, hence the name to clean dirty shoes or boots.

The unit connects to mains water via an 1/2" connector and is operated by two ball valves. Simply turn open the valve to allow water to flow out through the handbrush or to the bottom spray jets.

The handbrush is perfect for cleaning the sides of boots and the bottom brush and 2 side brushes for dirty soles. Quick, easy and simple.

With a unique enclosed design that minimises splashing plus the built-in handles, the AQUA Cube not only reduces the risk of falling but minimises the potential risk of cross contamination. Contaminating wastewater is collected in the base and is easily channelled away toward the left side 1 1/2" hole to be drained away.

With the optional venturi system you can also have sanitised water to eliminate pathogens.

For heavy soiling the optional grate is also useful to scraping of soil and other muddy materials.
